****ACHTUNG: Für ältere Aprilia Modelle, welche mit einer Siemens ECU ausgestattet sind müssen Sie das serielle Anschlusskabel ZU-RV09E mit der plus und minus Krokodilklemme verwenden! Ein veraltetes Anschlusskabel mit nur einer plus Krokodilklemme dürfen Sie auf keinen Fall verwenden! Dadurch verursachen Sie einen Kurzschluss im RexXer und zerstören damit das Gerät. Die Gewährleistung des RexXers erlischt dadurch ebenfalls. / ATTENTION: For older Aprilia models equipped by a Siemens ECU you have to use the serial Cable ZU-RV09E with positive and negative Alligator clamp! In case you have a cable with only a positive Alligator clamp, you can't use it! It will cause a short-circuit and the board of the RexXer will be damaged! It will also invalidate the warranty.

*****HINWEIS: Für MV Agusta Modelle, die mit einer Magneti Marelli 5SM ECU ausgestattet sind, müssen Sie das seriellle Anschlusskabel ZU-RV09E mit der plus und Minus Krokodilklemme verwenden! Falls Sie ein Kabel mit nur einer plus Krokodilklemme verwenden, können Sie die ECU nicht auslesen bzw. beschreiben (flashen), da die spezielle Masseverbindung fehlt! / NOTE: For MV Agusta models equipped by a Magneti Marelli 5SM ECU you have to use the serial Cable ZU-RV09E with positive and negative Alligator clamp! In case you have a cable with only a positive Alligator clamp, you can't read or write the ECU because the ground line is missing!

Bitte beachten Sie: Alle ECUs vom Typ Magneti Marelli MIU müssen zwingend im Fahrzeug beschrieben (geflasht) werden, diese lassen sich nicht im ausgebauten Zustand flashen, da es sonst zu Problemen mit der Wegfahrsperre führen kann. / Please note: All Type Magneti Marelli MIU ECU's must always be flashed in the Vehicle and can not be edited when removed, otherwise you will get problems with the immobilizer!

* K4 Direktanschlusskabel (nur für ECU im ausgebauten Zustand) / *K4 direct conncection cable (only for direct connection on the ECU)*

**Für diese Fahrzeuge ist es zwingend notwenig nach dem Beschreiben (flashen) der ECU eine spezielle Rückstellung mittels offiziellem Testgerät oder dem RexXer EVO durchzuführen! / For this bike it's necessary to do a special reset which is only available by an official test device or the new RexXer EVO!

***Für diese Fahrzeuge ist es zwingend notwenig nach dem Beschreiben (flashen) der ECU eine TPS (Drosselklappenpoti) Rückstellung durchzuführen, da das Fahrzeug sonst keine Gasannahme mehr hat. / For this bike it's necessary to make a TPS reset after flashing the ECU, otherwise the bike has no throttle input.

HINWEIS: Der RexXer kann bei einigen EUC Typen (Continental M3C, M3D und M4D, M4C, Bosch ME.17, ME17.2.42 BMS-O, ME17.2.4 BMS-MP, ME17.2 BMS-X, Mitsubishi Melco, Eldor) das serienmäßige Mapping nicht über den Inspektionsstecker auslesen, da diese ECU-Typen diese Funktion nicht ermöglichen. Der RexXer liest hier lediglich einen Dummy mit der in der ECU hinterlegten Seriennummer aus, damit er den Zugang erhält.
Hierzu finden Sie ab sofort online eine Liste aller in der Database vorhandenen original Maps:
BMW mit Bosch BMS-X, BMS-O und BMS-MP ECU
Ducati mit Conti M3C/M3D/M4D, Mitsubishi Melco ECU
MV Agusta mit Eldor ECU

PLEASE NOTE: For some ECU Types (Continental M3C, M3D and M4D, M4C, Bosch ME.17, ME17.2.42 BMS-O, ME17.2.4 BMS-MP, ME17.2 BMS-X, Mitsubishi Melco, Eldor) the RexXer can't read out the original mapping using your OBD connector, since these ECU-types don't support this function. To gain access, the RexXer just reads out a dummy with the serial number stored in the ECU.
As of now you can find therefor a list with all in the Database available original mappings:
BMW w/ Bosch BMS-X, BMS-O and BMS-MP ECU
Ducati w/ Conti M3C/M3D/M4D, Mitsubishi Melco ECU
MV Agusta w/ Eldor ECU
